

## LEGIC<sup>®</sup> Golf Pass – all-in-one-card

### The challenge

Modern golf complexes, golf clubs as well as golf parks, are committed to ensure that their members and guests feel at ease, can enjoy their sport to the full, and also have the appropriate room for enjoyment and relaxation.

Traditionally, every member is given a membership card, possibly a key to the clubhouse, a key to the caddy room; they also need special tokens for the ball dispenser, and they pay in the restaurant in the conventional way. This is rather inconvenient for members and guests and furthermore an expensive operation scheme for the golf club.

### The solution

The multifunctional membership card opens up the option of carrying out all these tasks with one single integrated credential. This credential provides all the information necessary for access to the clubhouse, access to other areas, cashless payment at the ball dispensers and in the restaurant, as well as for every other application where the member or a guest has to identify himself in some way. If desired the solution can be adapted and expanded at any time.

In this way the multifunctional membership card scheme supports the club's efforts to provide its members with the best possible comfort while, at the same time, simplifying the operational procedures.

### The system

The multifunctional membership card is based on the LEGIC all-in-one card concept. The core of the pass is the contactless LEGIC chip. This can be in the form of a card, a key fob or a watch, as the club may wish. The stored data is transmitted contactlessly to the reader, with the result that, provided the member is authorised, doors will open; a barrier can be controlled in the same way.

Other examples are:

- electronic locker locks in the changing room and for the caddy boxes
- electronic access control to the caddy room, changing room and club room
- cashless payment at the ball dispenser, in the pro shop and in the restaurant
- and many more.

### Extremely easy to use

Data is transmitted contactlessly at a comfortable reading distance from the credential (e.g. wristband, key fob, plastic card, watch, etc.) to the reader (on the car park barrier post, the locker lock, inside the coffee machine, etc.)

### The large LEGIC partnership network

Technology from LEGIC and the tailored solution from our partners. The large LEGIC partnership network offers a wide variety of compatible products and total solutions for access control, cashless payment, parking, customer loyalty schemes, ticketing etc. In over 50,000 companies, including many golf courses, LEGIC technology, proven a million times, is in constant daily use.

### The benefits:

- Very easy for members and guests to use
- Increases turnover in the restaurant
- Comprehensive, flexible solution
- Large partnership network with compatible products
