

## Quick reference – Upgrade from LEGIC prime to LEGIC advant

### From LEGIC prime to LEGIC advant in three steps

The elements of your LEGIC prime system can be replaced step by step to benefit from the advanced LEGIC advant technology.

#### Step 1 – Replacement of Master-Token

LEGIC prime Master-Token are replaced with LEGIC advant Master-Token. A LEGIC advant reader is required for configuration of the LEGIC prime or LEGIC advant transponder.

#### Step 2 – Replacement of readers in the field

All LEGIC prime readers will be gradually replaced during operation. The LEGIC prime cards can be used in mixed operation with both reader technologies<sup>2</sup>.

#### Step 3 – Replacement of credentials (mixed population possible)

After the upgrade of all readers to LEGIC advant, the credentials will be gradually exchanged to LEGIC advant transponders.

The LEGIC prime mode in the LEGIC advant reader must be switched off after the upgrade.

<sup>1</sup> Option: credentials can already be replaced in step 1 or 2 by hybrid credentials (LEGIC prime and LEGIC advant transponder incorporated in the same card)

<sup>2</sup> Moreover, LEGIC advant readers have a LEGIC prime mode which allows the reading of LEGIC prime transponders and Master-Tokens. This mode can be switched off and allows a smooth migration from LEGIC prime transponders to more secure LEGIC advant transponders.
